PROFESSIONAL SUMMARY

PHP Developer with 2+ years of experience delivering web applications, REST APIs, ERP platforms, eCommerce solutions, and mobile backend services. Hands-on expertise in Laravel, CodeIgniter, Vue.js, Livewire, Filament, Eloquent ORM, MySQL, and MVC architecture, with a strong focus on backend development, database optimization, and API integration. Proven ability to support business-critical workflows, improve application performance, and collaborate effectively in Agile development teams.

TECHNICAL SKILLS

Languages: PHP, JavaScript, SQL, HTML5, CSS3

Frameworks: Laravel, CodeIgniter 3, Vue.js, Livewire, Filament, Blade, Bootstrap, jQuery, AJAX

Databases: MySQL, Eloquent ORM, database design, query optimization, indexing

Backend: REST API development, API authentication (Sanctum, Passport), API integration, JSON, mobile backend services

Tools: Git, GitHub, Composer, Postman, PHPUnit, Agile, Scrum

Core Strengths: MVC architecture, OOP, object-oriented programming, responsive web development, ERP systems, eCommerce solutions

PROFESSIONAL EXPERIENCE

PHP Developer

Mar 2025 - May 2026

Genova Technologies

- Develop enterprise web applications using Laravel, CodeIgniter, Filament, and Livewire for multiple client requirements.
- Architect and integrate REST APIs to support third-party services and reliable data exchange.
- Optimize database structure and indexing strategies, improving query performance by 40%.
- Collaborate with cross-functional teams in Agile sprints to deliver features aligned with business goals.
- Apply MVC architecture and clean coding practices to maintain scalable and maintainable codebases.

Self-Directed Learning

Sep 2024 – Mar 2025

Independent Study

- Deepened expertise in Laravel advanced patterns, PHPUnit testing methodologies, and API authentication using Sanctum and Passport.
- Built personal projects to reinforce full-stack development skills and explore new architectural patterns.

Junior PHP Developer

Mar 2024 – Sep 2024

UCPro

- Built and maintained a full-stack eCommerce platform using Laravel and Vue.js, enabling end-to-end online retail workflows from product browsing to checkout.
- Developed and expanded REST APIs to support transaction-heavy backend workflows and third-party integrations.
- Created responsive and interactive user interfaces with Vue.js to improve usability and engagement.
- Integrated multiple payment gateways and implemented secure order management workflows, ensuring reliable transaction processing.

PROJECTS

Office Management ERP System

CodeIgniter3

- Developed a 7-module ERP spanning Employee Management, Attendance & Leave Tracking, Payroll, Task & Project Management, Finance & Expense Management, Document Management, and real-time Dashboards.
- Implemented approval workflows for task management and expense tracking, reducing manual overhead for managers.
- Created a centralized Document Management system enforcing role-based access control (employee, manager, admin).
- Built real-time Reports & Dashboards across all modules to provide management visibility and assist decision-making.

Construction Management ERP System

CodeIgniter 3

- Designed and delivered an 8-module ERP covering projects, procurement, inventory, equipment, workforce, scheduling, billing, and reporting.
- Built REST APIs for mobile applications so that on-site teams could access project data, submit reports, and manage tasks in real time.
- Created configurable modules to support different client workflows and operational requirements.
- Enforced Role-Based Access Control (RBAC) and multi-user permissions for organizational hierarchy management.

Vehicle Management Platform

Laravel, Filament

- Improved a dealer management system for vehicle inventory, finance tracking, service scheduling, expense management, transactions, and reporting.
- Applied Role-Based Access Control (RBAC) with granular permissions across multiple user roles for dealership operations.
- Built administrative panels with Filament to streamline data management and reporting workflows.

E-Doc Medical Appointment System

Laravel, Vue.js

- Built a medical appointment booking platform with a responsive user interface for patients and staff.
- Integrated appointment availability checks and automated notifications to support scheduling workflows.
- Implemented Role-Based Access Control (RBAC) to securely manage access for doctors, staff, and patients.

Blog Application

Laravel

- Enhanced a blogging platform with content management, user authentication, and social sharing functionality.

EDUCATION

Bachelor of Technology in Information Technology

MES College of Engineering, Kuttippuram | APJ Abdul Kalam Technological University | 2019 – 2023

LANGUAGES

English - Professional working proficiency

Malayalam - Native proficiency
